

EZIGRAZE

FORAGE OATS

BENEFITS

Ezigraze forage oat is a highly tillered spring x winter oat. It can be sown early in the season without the concern of going to head.

The grazing management is similar to that of ryegrass and can be grazed multiple times throughout the season due to good grazing recovery.

QUICK FACTS

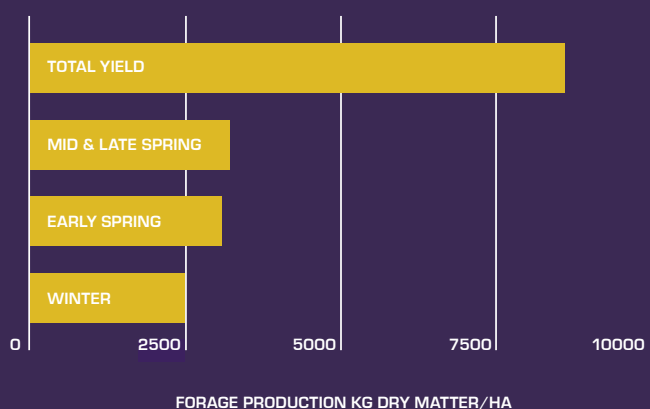

- **Grazing oat**
- **Sowing rate 80-100kg/ha**
- **Mid-late maturity**
- **Rainfall 450mm +**
- **Multiple grazings**

AGRONOMY GUIDELINES

Paddock preparations	Can be direct drilled or sown into cultivated seedbed. Cultivate seed bed if ground is uneven.
Sowing depth	Deep (30-60mm), depth can vary according to moisture availability.
Weed control	A weed free seedbed allows for better establishment results, the use of herbicides prior to sowing can alleviate competition from weeds. Speak to your local agronomist for herbicide recommendations.
Fertiliser	The use of fertiliser at sowing will improve the establishment and yield of the stand.
Grazing management	Oats should not be grazed until adequately anchored (cannot not be pulled out easily). Begin grazing at a height of 15cm down to 5cm. Suited to both rotational grazing or set stocking. Where set stocking, attention must be paid to stocking rate to allow recovery and re-growth of oats.

Refer to website for more detailed guidelines.

PERFORMANCE OF EZIGRAZE AT YARCK AND YAMBUK TRIAL IN 2020 & 2019

Ezigraze demonstrates robust and consistent winter yields with excellent recovery after grazing.
