

Finefeed

Diploid Annual Ryegrass

Finefeed - the new generation diploid ryegrass producing excellent quality feed

- ✓ Bred and grown in Australia
- ✓ Selected for fine leaves and high tiller density which makes it ideal for recovery after heavy grazing
- ✓ Strong emergence which can assist survival when false autumn breaks occur
- ✓ Good spring dry matter yield with a late heading date makes it suitable for grazing, silage or hay
- ✓ Finefeed is a more upright variety therefore improving utilisation under grazing or preventing lodging when being made into hay or silage
- ✓ Finefeed has been screened in high rust level areas in Australia to ensure outstanding rust resistance
- ✓ Selected for increased nutrient efficiency to allow better growth in marginal soil fertility

QUICK FACTS:

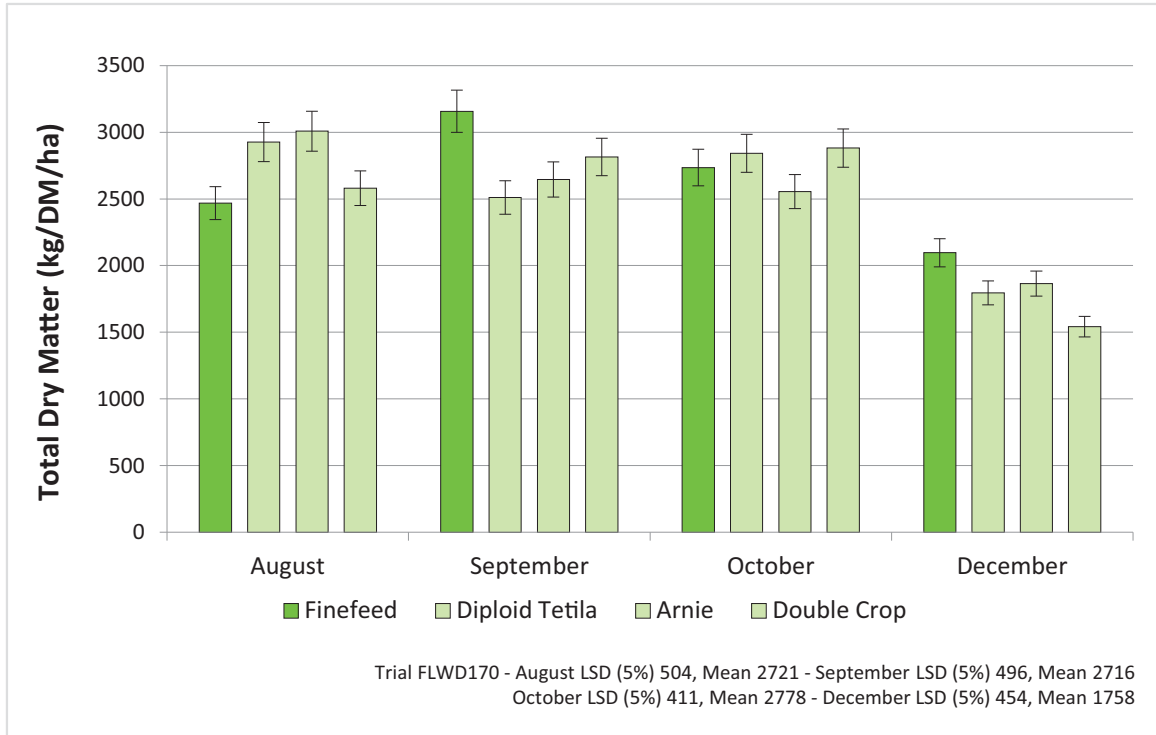

- Diploid annual ryegrass
- Finer leafed ryegrass for increased quality and palatability
- Quality feed with strong spring yields
- Suitable for grazing hay or silagee
- Late heading
- Improved rust resistance compared to older varieties
- Rainfall 550mm+ or irrigation
- Sow in autumn
- Sowing rate 20-25kg/ha
